SUPPLEMENT TO
REPORT NO.

OF THE UNITED STATES, WITHIN THE MEANING OF TITLE 18, SECTIONS 793 AND 794, OF THE U.S. CODE, AS AMENDED. ITS TRANSMISSION OR REVELATION OF ITS CONTENTS TO OR RECEIPT BY AN UNAUTHORIZED PERSON IS PROHIBITED BY LAW. THE REPRODUCTION OF THIS FORM IS PROHIBITED.

THIS IS UNEVALUATED INFORMATION

50X1-HUM

1. High tension lines run parallel to the railway track from Stalin (Brasov) to Ploesti, except for a few minor deviations necessitated by the topography. The masts are approximately 60 feet high and carry three bars, the middle one of which is longer than those above and below. They are spaced approximately every 300 yards. Between Stalin and Sinaia all six terminals carry a cable; but from Sinaia to Ploesti there are only three cables, attached to both sides of the top bar and one side of the center one.
2. Seven kilometers from Stalin toward Fagaras, just east of Codlea, high tension wires cross the road and go in the direction of Zarnesti. They originate in Stalin and are carried by pylons smaller than those described above, measuring about 25 to 30 feet high with a double base and single bar carrying a cable at each end.
3. There are no signs of electrification anywhere along the line between Stalin and Bucharest.
